

Arrays Are Counted From Zero

The index is not "which one" — it is "how far from the start".

```
const fruits = ['apple', 'banana', 'cherry', 'date', 'elderberry'];
```

```
fruits[0] is 'apple' — the first item  
fruits[4] is 'elderberry' — the last one  
fruits.length is 5
```

```
fruits[5] is undefined  
There are 5 items but no index 5.  
The last index is always length - 1.
```

Reaching one past the end is the "off-by-one error" — the most common bug in all of programming.
