

Stacks and Queues

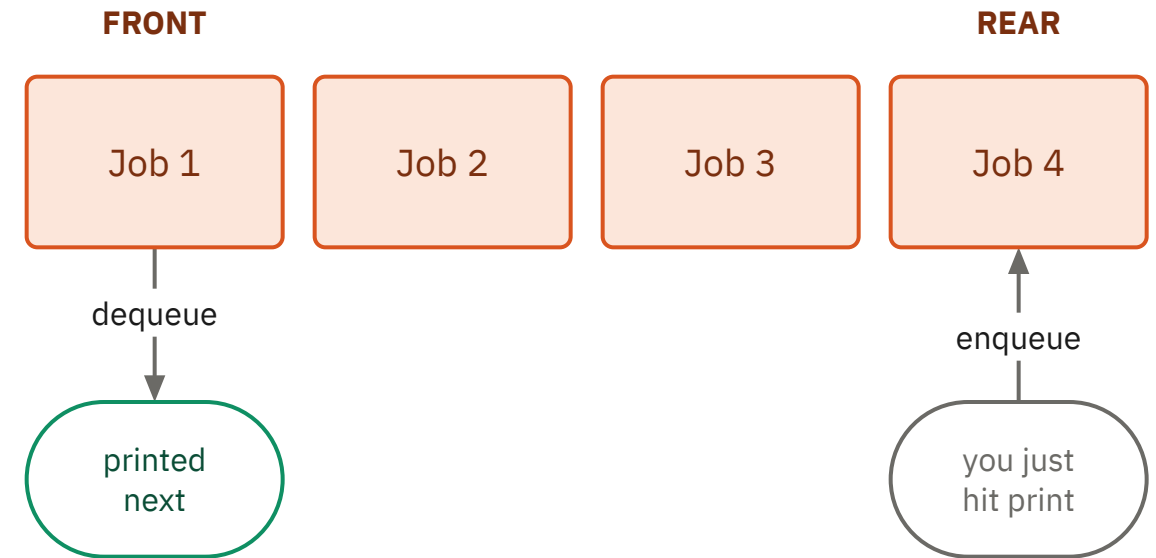

Two different answers to one question: which item comes out next?

STACK — Last In, First Out

Your browser's Back button. The page you visited most recently is the one you return to first.

QUEUE — First In, First Out

The print queue, or the line at the deli counter. Waiting longest means being served first.

A stack reverses the order things arrived in. A queue preserves it.

Choosing the wrong one is a real bug: undo that undoes the wrong thing, or a support queue that answers the newest ticket first.
